## (b) Amendments to the Claims

Kindly cancel claims 2, 3, 8, 12 and 13 without prejudice or disclaimer.

Please amend claims 1, 4, 14 and 15. A detailed listing of all the Claims that are or were in the application is provided.

1. (Currently Amended) An organic electroluminescent display comprising:

an organic electroluminescent device, having a microcavity structure, for emitting light resonating in the microcavity structure;

a light-gathering structure, overlying the organic electroluminescent device, for gathering the light emitted from the organic electroluminescent device; and

a light-shielding layer comprising a light-absorbing member for preventing external light transmitted from the outside from being reflected, overlying the light-gathering structure, having an opening through which a portion of the light gathered by the light-gathering structure passes, wherein the light-gathering structure includes a lens having a focus, and the opening of the light-shielding layer is disposed in the vicinity of the focus of the lens.

## 2. and 3. (Cancelled)

4. (Currently Amended) An organic electroluminescent display comprising:

an organic electroluminescent device array including a plurality of organic electroluminescent devices, each having a microcavity structure, for emitting light resonating in the microcavity structure;

a light-gathering layer including light-gathering structures overlying the organic electroluminescent device arranged so as to correspond to the organic electroluminescent devices, for gathering the light emitted from the organic electroluminescent devices; and

a light-shielding layer <u>comprising a light-absorbing member for</u>

<u>preventing external light transmitted from the outside from being reflected</u>, overlying the light-gathering structures, having openings through which a portion of the light emitted from the organic electroluminescent devices passes,

wherein each light-gathering structure includes a lens having a focus
and each opening of the light-shielding layer is arranged in the vicinity of a focus and
wherein the organic electroluminescent devices are arranged in a
plane and the openings are arranged so as to correspond to the light-gathering structures.

5. (Original) The display according to Claim 4, wherein the light-gathering layer includes first and second transparent members having different refractive indexes with spherical faces disposed therebetween.

- 6. (Previously Presented) The display according to claim 5, wherein the light-gathering layer includes a third transparent member having convex faces bulging toward the organic electroluminescent devices and a cavity portion disposed between the organic electroluminescent devices and the third transparent member.
- 7. (Original) The display according to Claim 4, wherein the light-gathering structures of the light-gathering layer are arranged at a pitch smaller than or equal to a pitch at which the organic electroluminescent devices of the organic electroluminescent device array are arranged.

## 8. (Cancelled)

- 9. (Original) The display according to Claim 4, wherein the openings are arranged such that light emitted in the direction perpendicular to a plane on which the organic electroluminescent devices are arranged passes through each opening.
- 10. (Original) The display according to Claim 4, wherein the openings have a size determined based on a wavelength of light emitted from the organic electroluminescent devices.
- 11. (Original) The display according to Claim 4, wherein the openings have a circular shape, a rectangular shape, or an elliptic shape.

## 12. and 13. (Cancelled)

14. (Currently Amended) An apparatus comprising:

a controller for providing image information;

an organic electroluminescent device, having a microcavity

structure, for emitting light resonating in the microcavity structure, based on the image information provided from the controller;

a light-gathering structure, overlying the organic electroluminescent device; and a light-shielding layer comprising a light-absorbing member for preventing external light transmitted from the outside from being reflected, overlying the light-gathering structure, having an opening through which a portion of the light gathered by the light-gathering structure passes and

wherein each light-gathering structure includes a lens having a focus and each opening of the light-shielding layer is arranged in the vicinity of a focus.

15. (Currently Amended) An apparatus comprising:

a controller for providing image information;

an organic electroluminescent device array including a plurality of organic electroluminescent devices, each having a microcavity structure, for emitting light

resonating in the microcavity structure, based on the image information provided from the controller;

a light-gathering layer including light-gathering structures overlying the organic electroluminescent device arranged so as to correspond to the organic electroluminescent devices, for gathering the light emitted from the organic electroluminescent devices; and

a light-shielding layer <u>comprising a light-absorbing member for</u>

<u>preventing external light transmitted from the outside from being reflected</u>, overlying the light-gathering structure, having openings through which a portion of the light emitted from the organic electroluminescent devices passes, <u>and</u>

wherein each light-gathering structure includes a lens having a focus
and each opening of the light-shielding layer is arranged in the vicinity of a focus and
wherein the organic electroluminescent devices are arranged on a
plane and the openings are arranged so as to correspond to the light-gathering structures.
